

DAG Detection timing App

The inovative, simple and efficient timing App.

Timing a race with DAG Detection is really easy. Run the app on your smartphone, tap on the detection icon and type in the bib number of the athlete, the data are then sent to the cloud and can easily be collected on a computer.

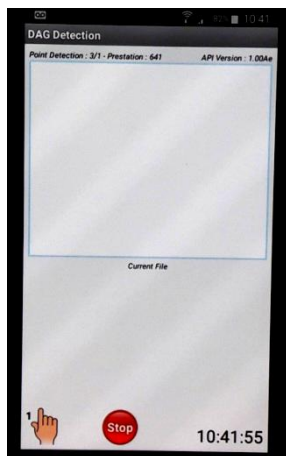

Your data are streamed and exploited almost in real time which allows you to give live results right after the athlete crosses the finishing line.

This ANDROID mobile app is the ideal timing device for checkpoints, small races, trails... It has be designed to be as simple as possible and requires no training.

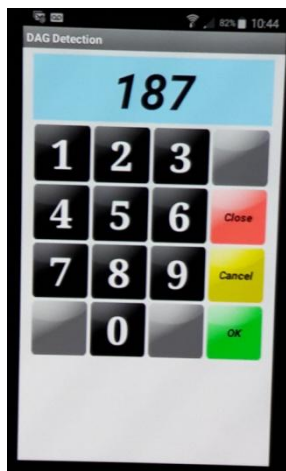

Easy to use

1) Launch the App

2) Type in the bib numbers

3) The time is instantly available online.

Working principles

**Time your checkpoints without any limitations
... live!**

- Really easy to use
- Collect your data from immediately from anywhere
- Works on Android smartphones
